

Amendments to the Claims:

Status of Claims:

Claims 1-20 are pending for examination.

Claims N/A are added by the present amendment.

Claims N/A are canceled by the present amendment.

Claims 1, 11, 18, 20 are in independent form.

1. (Currently Amended) A system for selecting and printing one or more documents accessible via a communication network comprising:

a printing device attached to the communication network, said printing device including a control interface ~~for allowing~~ configured to allow a user to interact with the printing device to select a document and configured to cause the document to be retrieved from a remote device accessible via the communication network; and

executable code stored in a memory, wherein in response to user interaction with the control interface the code is executed by a processor to cause the printing device to print the retrieved document.

2. (Original) The system of claim 1, wherein the printing device further comprises:

a display screen and print management software for displaying a file system menu that includes references to one or more computing systems attached to the communication network.

3. (Original) The system of claim 2, wherein a user interacts with the control interface to select one of said one or more computing systems from the file system.

4. (Original) The system of claim 3, wherein in response to selecting one or more of said computing systems the code is executed by a processor to display a list of documents available on the selected computing system.

5. (Original) The system of claim 1, wherein the printing device further comprises software for converting a selected document to printable format.

6. (Original) The system of claim 1, further comprising a server system attached to the communication network, said server including server software for converting a selected document to printable format.

7. (Original) The system of claim 6, wherein server software forwards a copy of the document in printable format to the printing device.

8. (Previously Presented) The system of claim 1, wherein the user can interact with the control interface to select a printing option.

9. (Previously Presented) The system of claim 8, wherein the print option is print media size.

10. (Previously Presented) The system of claim 8, wherein the print option is print resolution.

11. (Currently Amended) A method for selecting and printing one or more documents accessible via a communication network at a printing site, said method comprising:

in response to a user interacting directly with a printing device, causing the printing device to initiate a retrieval request for a selected document stored on a computing system; converting the selected document to a format suitable for printing on the printing device; transferring the converted document to the printing device based on the retrieval request from the printing device; and printing the document on the printing device.

12. (Previously Presented) The method of claim 11, wherein:
the printing device includes a control interface for displaying a file system menu that includes references to one or more computing systems.

13. (Previously Presented) The method of claim 12, further comprising:
selecting one of said one or more computing systems, in response to the user interacting with the control interface.

14. (Original) The method of claim 13, further comprising:
displaying a list of documents available on the selected computing systems, in response to selecting one or more of said computing systems.

15. (Original) The method of claim 11, further comprising:
interacting with the printing device to select one or more printing options.

16. (Original) The method of claim 15, wherein said one or more printing options include print media size.

17. (Original) The method of claim 16, wherein said one or more printing options include print resolution.

18. (Previously Presented) A printing device for selecting and printing one or more documents, said printing device comprising:
means for selecting and causing a document to be retrieved from a remote device, where the means for selecting and causing is configured within the printing device;
means for converting the selected document to printable format; and
means for transferring the document to the printing device.

19. (Previously Presented) The printing device of claim 18 further including means for selecting one or more print options.

20. (Currently Amended) A printing device comprising:

a control interface for allowing a user to directly interact with the printing device to select a document from a remote device and cause the document to be retrieved from the remote device; and

executable code stored in a memory configured to cause the printing device to print the retrieved document.
